

Accelerate your business with fast analytics and visualization

Tableau Desktop is a software application that enables anyone to analyze any kind of data quickly and easily. Create brilliant charts, graphs and other visualizations with a few clicks of your mouse. Quickly uncover relationships and identify outliers. Drill down to see exactly the information you need, or build performance dashboards for sharing with anyone.

Do more with your data

Making intelligent business decisions starts with a clear understanding of relevant information. Tableau gives users unprecedented power to extract actionable insights from raw data in a matter of minutes.

See and Understand. Create visual tables of data to reveal relationships, find patterns, and identify outliers. When information is visual, hidden gems stand out clearly.

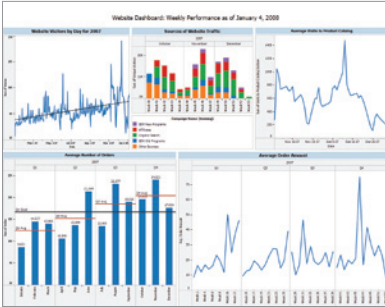

Pivot and Refine. Navigate a series of questions and answers using interactive visual analysis. Look at one factor a time or any number of factors simultaneously.

Search and Extract. Filter and zoom into data. Drill down to identify useful clusters of data and pull out exactly the information you need.

“Cleveland Clinic credits Tableau with saving \$20 million in its first year of use.”

*Tim Dotson
Inside Healthcare Computing*

Investigate and Predict. Make on-the-fly calculations. Compute growth by moving averages, totals and more. Even analyze times series from years to months to seconds.

Create Dashboards. Build dashboards that track performance against goals. Combine different databases into a single view. Use live data, so you never have to repeat the same analysis. Link and filter all the displays simultaneously.

Publish and Present. Export vivid and beautifully annotated presentations to other applications, including Microsoft Office.

Enjoy the benefits from day one

Complex and stubborn databases become information playgrounds with Tableau's user-friendly interface. Simply drag and drop to analyze data intuitively in colorful charts and graphs. Users can install Tableau Desktop in minutes, connect easily to any spreadsheet, database, or data warehouse, and immediately start analyzing data.
